

What is Recursion?

How to write recursive code?

Function call Tracing

4 problems

Tc and Sc

Recursion → Function calling itself

```
void add ( ) {  
    |  
    ||  
    ||  
    ||  
    add ( )  
    ,  
    >
```

Bigger Doll \rightarrow Smaller Doll
similar Doll
End Doll

Recursion \rightarrow solving larger problems
using smaller similar subproblem

$$\text{sum}(N) = 1 + 2 + 3 + \dots + (N-1) + N$$

$$\text{sum}(N) = \underbrace{\text{sum}(N-1) + N}$$

$$\text{sum}(5) = \text{sum}(4) + 5$$

$$\downarrow$$
$$1 + 2 + 3 + 4$$

How to write a recursive code?

3 Logical Steps:

1. Assumption : Decide what your fn does

2. Main Logic :

Recursive relation to code /
breaking big problem into smaller
subproblem

3. Base condition

End condition where recursion stops /
smallest prob for which you already
know answer

Q. Recursive code to calculate sum of
N natural nos.

N=4 ans=10

// Given N, it will return sum of
first N natural nos.

```
int sum (int N) {
```

```
    | If (N==0) return 0 | If (N==1)  
    |                     | return 1  
    | return sum (N-1) + N |  
    |  
    >
```

Fn call Tracing

seq of fn calls that are made when a program is executed

```
fn add(x,y) <
|   return x+y
|>
```

```
fn sub(x,y) <
|   return x-y
|>
```

```
fn mul(x,y) <
|   return x*y
|>
```

```
fn print(x) <
|   cout << x
|>
```

```
fn main() <
|   x = 10, y = 20
|   print(sub(mul(add(x,y), 30), 75))
|>
```

NOTE: $2! = 1$
 $0! = 1$

1. Given a +ve integer N , find factorial of N

$$N=3$$

$$\text{ans} = 6$$

$$3! = 3 \cdot 2 \cdot 1$$

$$N=4$$

$$\text{ans} = 24$$

$$4! = 4 \cdot 3 \cdot 2 \cdot 1$$

$$N=5$$

$$\text{ans} = 120$$

$$\text{fact}(N) = 1 \cdot 2 \cdot 3 \cdot 4 \cdot \dots \cdot (N-1) \cdot N$$

$$\text{fact}(N) = \text{fact}(N-1) \times N$$

$$4! = 1 \times 2 \times 3 \times 4$$

$$4! = 3! \times 4$$

① // Given N , it will return $N!$
`int fact (int N) {`

③ `if (N == 1) return 1`

② `return fact (N-1) * N`

}

$$N! = (N-1)! \times N$$

This code fails for $N=0$

24

int fact (int ~~4~~) <

if (N == 1) return 1

return fact (N-1) * N
6

int fact (int ~~3~~) <

if (N == 1) return 1

return fact (N-1) * N
2

int fact (int ~~2~~) <

if (N == 1) return 1

return fact (N-1) * N
1

int fact (int ~~1~~) <

if (N == 1) return 1

return fact (N-1) * N
