

Welcome 😊

Agenda : BM 2  
3 questions.

Q. Given an integer array where every number occurs twice except one element. Find the unique element

App 1  $\Rightarrow$  XOR of all the elements  
T.C  $\Rightarrow O(N)$   
S.C  $\Rightarrow O(1)$

App 2  $\Rightarrow$  Use hashset/map and store freq. T.C  $\rightarrow O(N)$   
S.C  $\Rightarrow O(N)$

App 3  $\Rightarrow$  Sort the array and check T.C  $\Rightarrow O(N \log N)$   
S.C  $\Rightarrow O(1)$

App 4. V. Interesting Sol<sup>n</sup>

eg: A: [ 2 3 5 6 3 6 2 ]

$$1 \oplus 1 = 0$$

Count of set bits on any pos<sup>n</sup>  $\Rightarrow$   $\begin{cases} \text{odd} \Rightarrow 2n + \underline{1} \rightarrow \text{unique element} \\ \text{even} \Rightarrow \underline{2n} \\ \text{pairs repeating numbers} \end{cases}$

code

```
for ( i=0 ; i<32 ; i++)
```

```
{
```

```
    count = 0
```

```
    for ( j=0 ; j<N ; j++)
```

```
    {
```

```
        if ( checkbit ( arr[j], i ) == true )
```

```
        {
```

```
            count ++
```

```
        }
```

```
    }
```

```
    if ( count % 2 == 1 )
```

```
    {
```

```
        // ith bit of unique element is set
```

```
        ans = ans | ( 1 << i )
```

```
    }
```

```
}
```

```
return ans
```

Q Given an integer array where every number occurs thrice except one element. Find the unique element

eg: [ 4 5 5 4 1 6 6 4 5 6 ]

Sol<sup>n</sup> Brute force.

→ Use two for loops and count occurrence of each number.

T.C  $O(N^2)$   
S.C  $O(1)$

Sol<sup>n</sup> 2

XOR of all number ~~X~~

~~4 ^ 5 ^ 5 ^ 4 ^ 1 ^ 6 ^ 6 ^ 4 ^ 5 ^ 6~~

$1 ^ 4 ^ 5 ^ 6$

Sol<sup>n</sup> 2

Use hashset/map and store freq.

T.C =  $O(N)$   
S.C =  $O(N)$

Sol<sup>n</sup> 3

Sort the array and check

T.C =  $O(N \log N)$   
S.C =  $O(1)$

Sol<sup>n</sup> 4

Since every element occurs thrice.

count % 3 will give us unique element.

```
for ( i=0 ; i<32 ; i++)
```

```
{
```

```
    count = 0
```

```
    for ( j=0 ; j<N ; j++)
```

```
    {
```

```
        if ( checkbit ( arr[j], i ) == true )
```

```
        {
```

```
            count ++
```

```
        }
```

```
    }
```

```
    if ( count % 23 != 0)
```

```
    {
```

```
        // ith bit of unique element is set
```

```
        ans = ans | (1<<i)
```

```
    }
```

```
}
```

```
return ans
```

T.C  $\Rightarrow O(N \times 32)$

S.C  $\Rightarrow O(1)$

Extensions

- 1) Every ele. occurs 4 times except 1. XOR
- 2) Every ele. occurs thrice except one ele. which is repeating twice. above sol<sup>n</sup> will work.

Q Given  $N$  elements where every element occurs twice except 2 unique element. Find the two unique elements.

eg: 3 6 4 4 3 8  
o/p  $\rightarrow$  6, 8.

Sol<sup>1</sup> Brute force.  
 $\rightarrow$  Use two for loops and count occurrence of each number.  
 T.C  $O(N^2)$   
 S.C  $O(1)$

Sol<sup>2</sup> XOR of all number ~~X~~  
 3 6 4 4 3 8  
 $6 \wedge 8$

Sol<sup>2</sup> Use hashset/map and store freq.  
 T.C =  $O(N)$   
 S.C =  $O(N)$

Sol<sup>3</sup> Sort the array and check  
 T.C =  $O(N \log N)$   
 S.C =  $O(1)$   
 $6 \wedge 8$

	3	2	1	0
6	0	1	1	0
8	1	0	0	0
	1	1	1	0

= 14

$\Rightarrow$  You can use 1<sup>st</sup>/2<sup>nd</sup>/3<sup>rd</sup> bit to differentiate b/w 2 unique numbers in this case ( $6 \wedge 8$ )

1st  
6 → 110  
3 → 011

1) XOR of all elements

Code 2) Set bit in XOR ans.

pos<sup>n</sup> = -1

for (i = 0; i < 32; i++)

{ if (checkBit(ans, i) == true)

{

pos<sup>n</sup> = i // differentiator.

break;

}

}

3) Split array into two baskets using pos<sup>n</sup>

set = 0      unset = 0

for (i = 0; i < N; i++)

{ if (checkBit(arr[i], pos<sup>n</sup>) == true)

{

set = set ^ arr[i]

}

else {

unset = unset ^ arr[i]

}

}

print (set)

print (unset)

T.C ⇒ O(N+N)

⇒ O(N)

S.C ⇒ O(1)

Q Given an array A of N integers. Find the sum of bitwise XOR of all pairs of numbers in the array.

eg: [ 1 2 3 ]

$$\{ 1 \ 2 \} \rightarrow 3$$

$$\{ 2 \ 3 \} \rightarrow 1$$

$$\{ 1 \ 3 \} \rightarrow 2$$

$$\underline{\underline{6}} \leftarrow \text{o/p}$$

$$1 \rightarrow 01$$

$$2 \rightarrow 10$$

$$3 \rightarrow 11$$

$$\wedge \begin{array}{r} 01 \\ 10 \\ \hline 01 \end{array}$$

Sol<sup>n</sup>

Contribution Tech

$\forall$   $i^{\text{th}}$  bit

X elements with  $i^{\text{th}}$  bit set

Y elements with  $i^{\text{th}}$  bit unset

$$(\text{set}, \text{unset}) = 1 \text{ } i^{\text{th}} \text{ bit}$$

$$000 \rightarrow 3$$

$$00 \rightarrow 2$$

$$\underline{\underline{3 \times 2}}$$

$X \times Y$  pairs whose  $i^{\text{th}}$  bit is set.

$$(1 \leq i \leq 2^i)$$

$$\text{Contribution of } i^{\text{th}} \text{ bit} \rightarrow (X \times Y) \times (1 \ll i)$$

$$[ 1 \ 2 \ 3 ]$$

$$1 \rightarrow 01$$

$$2 \rightarrow 10$$

$$3 \rightarrow 11$$

$$0^{\text{th}} \text{ bit} \Rightarrow (2 * 1)^* 2^0 = 2 \quad \begin{matrix} \times & \times \\ 1, 3 & 2 \end{matrix}$$

$$1^{\text{st}} \text{ bit} \Rightarrow (2 * 1)^* 2^1 = 4 \quad \begin{matrix} 2, 3 & 1 \end{matrix}$$

$$\underline{2+4} = 6$$

[ 11      12      13 ]

$$11 \rightarrow \begin{matrix} 3 & 2 & 1 & 0 \\ 1 & 0 & 1 & 1 \end{matrix}$$

$$12 \rightarrow \begin{matrix} 3 & 2 & 1 & 0 \\ 1 & 1 & 0 & 0 \end{matrix}$$

$$14 \rightarrow \begin{matrix} 3 & 2 & 1 & 0 \\ 1 & 1 & 1 & 0 \end{matrix}$$

$$0^{\text{th}} \text{ bit} \Rightarrow (2 * 1)^* 2^0 = 2 \quad \begin{matrix} \times & \times \\ 11 & 12, 14 \end{matrix}$$

$$1^{\text{st}} \text{ bit} \Rightarrow (2 * 1)^* 2^1 = 4 \quad \begin{matrix} 11, 14 & 12 \end{matrix}$$

$$2^{\text{nd}} \text{ bit} \Rightarrow (2 * 1)^* 2^2 = 8 \quad \begin{matrix} 12, 14 & 11 \end{matrix}$$

$$3^{\text{rd}} \text{ bit} \Rightarrow (3 * 0)^* 2^3 = 0 \quad \begin{matrix} 12, 14, 11 & - \end{matrix}$$

$$\underline{\underline{14}}$$
